Regular work for driver

About us

Community Technology supports organisations in the Charitable and Voluntary sector by the provision of Technical Support, Equipment maintenance and by supporting Open Source Software.

A non-profit organisation with a strong ethical basis to its work, Community Technology also promotes the re-use and recycling of equipment and endeavours to minimise the environmental impact of IT waste.

The Opportunity

Comm-tech provide an IT recycling service in the London area and requires a driver to make collections and transport equipment to the warehouse.

About you

Either you currently work with your own vehicle or hold a clean UK driving license valid for the last two years. You will be able to liaise with us and schedule a workload within a week by agreement, routinely by use of emails also. You would have the ability to perform routine tasks with an attention to detail, such as paperwork for collections and inventory note matching. Some awareness of equipment which may have reuse potential and handling thereof would be beneficial.

The Benefits

There is a likelihood of regular and repeat work from us, particularly if the recycling side of the operation manages to flourish with your contribution.

What Next

If you are interested in discussing this opportunity further then please contact us, ideally by email.
