

*Attention Silver Surfers*

Want to get on the information superhighway so you can order up your groceries straight to your door? Or catch up on that television programme you missed last night?

Here at Comm-Tech we are selling refurbished machines of various specifications to suit your needs. So if you're keen to be green, our recycled machines offer you a reliable and immediately usable computer at a budget price and still with a warranty that you can trust.

We can offer both Windows machines and ones that run Ubuntu. We recommend Ubuntu for users who have not used a computer before and it has many advantages, including being much less susceptible to any virus infections.

All of our computers are offered with a full set of open source software packages to make sure that they are useful straight away.

We can also deliver and set the machine up in your home to get you up and running. This service can be offered as an initial deliver and setup (light option) for just £40 additional to the computer cost. This will include delivery to your desktop and all cables connected and machine running with you logged on.

More comprehensive assisted installation is available, but this should be sufficient for most needs.
